

These students volunteered their time, effort, and talent to inform me about the important issues facing their generation. As young leaders within their communities and their schools, these students boldly represent the promise and the hope we all have for their very bright future.

President Ronald Reagan said, "Freedom is never more than one generation away from extinction. We didn't pass it to our children in the bloodstream. It must be fought for, protected, and handed on for them to do the same, or one day we will spend our sunset years telling our children and our children's children what it was once like in the United States where men were free."

To ensure that the blessing of freedom is passed from one generation to the next, the members of the CYAC spent time interviewing a veteran and documenting the experience for the "Preserving History Project." Today I'm proud to submit the brief summaries provided so the patriotic service of our dedicated veterans and the thoughtful work of the CYAC may be preserved for antiquity in the CONGRESSIONAL RECORD. A copy of each submitted student summary follows.

To each member of the Congressional Youth Advisory Council, thank you for making this year and this group a success. It is not a coincidence that this congressional tribute celebrates two generations of service. Each of you is trusted with the precious gift of freedom.

You are the voices of the future and I salute you. God bless you and God bless America.

The summary follows:

I had known a little about what my dad did while he was deployed, but I had never pressed him for details. I think that is was partially because I assumed that anything that would make a good story would be classified for the next eighty years, but I also think that I was a little bit afraid of what I might hear. However, the stories that he shared were not as horrifying as I expected. I was stunned when he told me that he had never had a casualty in any of his units.

Our interview session was about as casual as it could be. I went outside to interview him while he was working in the yard. During our interview I learned more about some of the places he had visited in peace, including the U.A.E. (United Arab Emirates) and what was included in that country. At first I was surprised that this was one of his favorite places he has visited, but after he explained what was there it made perfect sense. I was honored that I could speak with my father about his experiences. It inspired me to do my utmost to make sure that I will preserve our military history.—Kai Fujisaka

AMERICA MUST CONTINUE TO LEAD THE FIGHT

HON. ADAM B. SCHIFF

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 22, 2010

Mr. SCHIFF. Madam Speaker, I rise today to remind my colleagues that April 25th is World Malaria Day. On this day, global health advocates around the world will be raising awareness about malaria, and the fight against this deadly disease.

Malaria is an acute and often fatal disease transmitted to humans by mosquitoes. The World Health Organization estimates that an-

nually, there are approximately 250 million cases of malaria and nearly 1 million deaths, primarily among children in Africa under five.

Malaria is highly preventable and treatable with existing tools, including insecticide-treated bed nets, indoor residual spraying of insecticides, and anti-malaria drugs. Through the President's Malaria Initiative, contributions to the Global Fund to Fight AIDS, TB, and Malaria, and other investments, the United States has played a prominent role in the global effort to fight this deadly disease.

This effort is already showing impressive results, but ensuring that available anti-malaria tools reach all of the people who need them will require greater dedication of resources from the U.S. and our partners. Furthermore, drug and insecticide resistance mean that today's tools are likely to lose their efficacy over time. Therefore, it is critical to invest in research on new tools, including drugs, insecticides, diagnostics, and, eventually, a malaria vaccine.

The past several years have seen remarkable gains against malaria. Securing and expanding these gains will require continued U.S. leadership and investment.

2010 WORLD MALARIA DAY—"WE CAN DEFEAT MALARIA"

HON. DONALD M. PAYNE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 22, 2010

Mr. PAYNE. Madam Speaker, I rise today to recognize the importance of World Malaria Day, which occurs on April 25th. For millions around the world—particularly in sub-Saharan Africa, where the global malaria burden is heaviest—the disease is a daily reality, an enduring epidemic that kills millions and impedes the progress and ambitions of entire nations.

In the last decade, however, it has been proven that this need not be the case; that malaria can, in fact, be defeated. Between 2000 and 2009, 384,000 lives were saved in 12 African countries alone, through resources like insecticide-treated bed nets, indoor residual spraying, and malaria prevention for women during pregnancy. This was accomplished through the efforts and support of many countries, organizations, and companies that effectively raised the level of prevention, treatment, program support, and health system-strengthening in sub-Saharan Africa.

In 2008, Congress authorized an historic \$48 billion for HIV/AIDS, tuberculosis, and malaria programs by passing H.R. 5501, the Tom Lantos and Henry J. Hyde United States Global Leadership Against HIV/AIDS, Tuberculosis, and Malaria Reauthorization Act of 2008. But the current level of funding is not where it needs to be to ensure that these life-saving measures reach the people who need them. In fact, current funding is only 25 percent of what is needed to achieve the malaria intervention and elimination goals established by the UN and the Roll Back Malaria partnership.

World Malaria Day is an opportunity to raise awareness for this cause and address its inherent challenges. This is not an endeavor for which we lack the knowledge, skills, or resources to win. Rapidly scaling up the distribution of malaria control interventions has been proven to have a dramatic impact on reducing

illnesses and deaths caused by malaria. There is a plan in place to put us on the path to eliminating this disease and, through our foreign assistance, we, as Americans, are an integral part of that plan.

Congressman BOOZMAN and I launched the Congressional Malaria Caucus to promote awareness in Congress of the efforts being made to stamp out the disease. We now have close to 60 Members of the Caucus, and I encourage us to see this plan through and help those who face the daily burden of malaria to reach their potential as a nation and as people.

PERSONAL EXPLANATION

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 22, 2010

Mr. CONYERS. Madam Speaker, on April 22, 2010, I regret that I was not present to vote on the Motion on Ordering the Previous Question on the Flake Privileged Resolution, the Motion to Refer the Flake Privileged Resolution, the Republican Motion to Instruct Conferees on H.R. 2194, and H. Res. 1270.

Had I been present, I would have voted "yea" on the Motion to Refer the Flake Privileged Resolution, and H. Res. 1270.

I would have voted "no" on the Motion on Ordering the Previous Question on the Flake Privileged Resolution and the Republican Motion to Instruct Conferees on H.R. 2194.

CAREGIVERS AND VETERANS OMNIBUS HEALTH SERVICES ACT

SPEECH OF

HON. JOHN H. ADLER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 21, 2010

Mr. ADLER of New Jersey. I rise in support of S. 1963, the Caregivers and Veterans Omnibus Health Services Act.

The Caregivers and Veterans Omnibus Health Services Act is a comprehensive piece of legislation aimed at augmenting the support services available to family caregivers of wounded veterans, improving VA services to women veterans, preventing veteran homelessness, and increasing mental health care access to veterans.

This historic bill achieves so many necessary and important goals. First, it provides immediate support for veteran caregivers by creating a program to offer caregiver training, access to mental health counseling, and 24-hour respite care in the veteran's home. Family caregivers sacrifice so much of their own lives in order to care for our nation's heroes. It is so important that we give them every supportive service they need so they do not become overwhelmed by the daily realities of caring for a wounded veteran.

Second, this bill seeks to build a VA health care system respectful of the unique medical needs of women veterans. For the first time, VA will be authorized to provide health care for newborn infants of women veterans. Our women veterans deserve private health care that is respectful of their unique medical needs.
